

## Triple-Active Control

### Knock Down and Kill Flying Insects

Troika® Misting Concentrate combines three active ingredients (Group 3A) for optimal performance against flying insects providing a quick knockdown and kill. Animals may be present at the time of application, which saves time and reduces stress on animals from moving them.

#### Features and Benefits

- For use over animals and around their facilities
- Kills flies, mosquitoes and other listed insects
- Synergized to combat metabolic resistance
- No withholding time periods for use before animal processing
- Labeled for use in automatic misting systems or manual application

#### Packaging

- 64 ounce unit (4 per case)
- 55 gallon drum
- 275 gallon tote

## Efficacy of Troika® When Applied as Direct Spray Applications

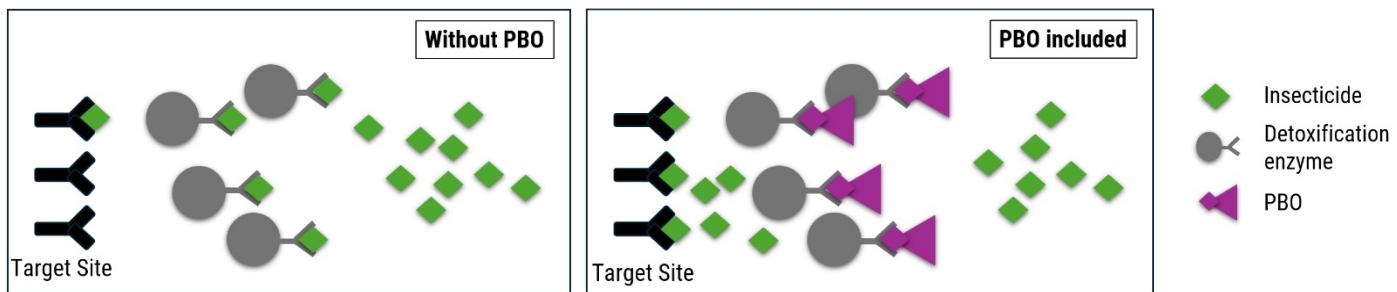

Source: Snell Scientifics, 2012.

### What does this data mean for your business?

Troika is capable of providing high mortality against tough flying insects around livestock environments such as flies and mosquitoes, even when applied through an outdoor misting system.

### The Role of Piperonyl Butoxide (PBO) in Enhancing Efficacy

### What does this mean for your business?

To have a lethal effect, the active ingredient in an insecticide needs to reach its target site within the insect. Resistant insects commonly have a heightened defense mechanism, cytochrome P450 enzymes, that attack insecticides. PBO binds to these detoxification enzymes, allowing the insecticide to reach its target site and work more effectively.
