## **EMBARGOED UNTIL AUGUST 10, 2026**

**MGK Introduces Troika® Pour-On for Fast and Effective Insect Control on Livestock**  
*Multiple actives in an oil-based, ready-to-use formulation with versatile application options for livestock producers.*

Minneapolis, MN — Leading insecticide manufacturer MGK is excited to announce the launch of Troika Pour-On. This oil-based, ready-to-use formulation is a dual-active, synergized insecticide that provides fast and effective control of insects on livestock that can be applied as a pour-on, spray, or in backrubbers and automatic misting systems.

"Livestock producers need insect control solutions that are effective, easy to use and adaptable to a variety of management practices," said Nick Consulo, Animal Health Sales Manager at MGK. "Troika Pour-On delivers fast control of key livestock insects while offering the flexibility to apply the product in the way that works best for their operation."

Key features of Troika Pour-On include:

- Kills flies, lice, mosquitoes, ticks and other listed insects
- For use on cattle, horses, sheep and swine
- Oil-based for better adhesion to animal hides
- Approved for daily application, providing flexibility during increased insect pressure
- Synergized with piperonyl butoxide (PBO) to combat metabolic resistance

The Troika brand is built on a powerful combination of two active ingredients, a botanical pyrethrin and a synthetic pyrethroid, plus a synergist, piperonyl butoxide. Together, they deliver a quick kill and residual control against insects. Troika Pour-On is the newest addition to the Troika family, offering the same proven performance as an oil-based solution.

As livestock producers face emerging insect threats, Troika Pour-On has accepted FIFRA Section 2(ee) recommendations for New World Screwworm response efforts in select states, providing producers with an additional tool to help protect livestock where those recommendations have been approved.

Contact your local MGK or distributor sales representative for availability.

### **About MGK**

Founded in 1902 and based in Minnesota, MGK develops and delivers insect control solutions and is a global leader in botanical insecticide technologies, as well as a broad range of

conventional chemistries. In 2026, MGK integrated with Valent BioSciences and Valent North America under Sumitomo Biorational Company (SBC), strengthening its ability to advance innovation and deliver solutions that address evolving challenges and unlock new opportunities for customers. This integration brings together expertise in research, manufacturing and commercialization to accelerate the development of innovative technologies worldwide. Headquartered in Libertyville, Illinois, SBC focuses on the research, development and commercialization of sustainable technologies derived from natural sources such as microbials and botanicals to serve agriculture, environmental health, public health and pest control markets worldwide.
