

Rapid Knockdown and Kill

OMRI Listed Broad-Spectrum Insect Control

Pyganic® Gardening is an OMRI Listed insecticide that provides rapid knockdown and kill of more than 140 home garden insects. Its active ingredient, pyrethrins (Group 3A), is a botanical insecticide derived from chrysanthemum flowers. Pyganic Gardening is labeled for use on over 300 garden plants and crops, including tomatoes, peppers, apples and herbs, and can even be applied on the day of harvest.

Features and Benefits

- Provides rapid knockdown and kill
- Kills over 140 insects including aphids, beetles, caterpillars, mites and thrips
- OMRI Listed for organic gardening
- Labeled for use on ornamentals, vegetables, flowers, fruits and nut trees
- Non-persistent in the environment and can be used on day of harvest

Packaging

- 8 ounce bottle (12 per case)
- 1 quart bottle (6 per case)

Average Mortality of Beet Armyworm Larvae Treated With Pyrethrins

Source:

Landis Intl. 2001.

What Does This Data Mean for Your Business?

Exposure to treated leaves shortly after application with Pyganic Gardening provides effective control of a broad spectrum of insects, including caterpillars such as beet armyworms. To maximize performance, thorough coverage is essential. Apply the spray to directly contact as many insects as possible, helping increase mortality and reduce foliage damage.

Pyrethrum vs Pyrethroids

What Does This Image Mean for Your Business?

Derived from chrysanthemum flowers, pyrethrum provides broad-spectrum insect control through a blend of six compounds known as esters. Each batch of pyrethrum contains a slightly different ratio of these esters, creating a complex and balanced profile, much like the subtle differences between coffee brews. In contrast, synthetic pyrethroids are mimics of pyrethrins that contain fewer chemical variants, typically based on a single pyrethrin ester.
